Dynamic 2022

Final revision Dynamic 2022

Concept (1) The displacement \vec{S}

The displacement of a body \vec{S} is the change of its position vector

$$\vec{S} = \Delta\vec{x} = \vec{x} - \vec{x}_0$$

Final revision Dynamic 2022

Concept (2) The instantaneous velocity

$$\vec{V} = \lim_{\Delta t \rightarrow 0} \frac{\Delta \vec{x}}{\Delta t} = \lim_{\Delta t \rightarrow 0} \frac{\vec{x}(t + \Delta t) - \vec{x}(t)}{\Delta t} = \frac{d\vec{x}}{dt} = \frac{d\vec{S}}{dt}$$

Final revision Dynamic 2022

Concept (3) The instantaneous acceleration

$$\vec{a} = \lim_{\Delta t \rightarrow 0} \frac{\Delta \vec{V}}{\Delta t} = \lim_{\Delta t \rightarrow 0} \frac{\vec{V}(t + \Delta t) - \vec{V}(t)}{\Delta t} = \frac{d\vec{V}}{dt} = \frac{d^2 \vec{x}}{dt^2}$$

Final revision Dynamic 2022

Concept (4) If $V = f(x)$, $x = g(t)$ then

$$\frac{dv}{dt} = \frac{dv}{dx} \times \frac{dx}{dt}$$

$$\therefore a = V \cdot \frac{dv}{dx}$$

Final revision Dynamic 2022

Example

A particle moves in a straight line such that its velocity (V) is given by the relation $V^2 + x^2 = 25$, where x is the position of the particle, a is the acceleration then

(a) $V^2 + a^2 = 25$

(b) $a^2 + x^2 = 25$

(c) $V^2 + a^2 = 0$

(d) $a^2 + x^2 = 0$

Final revision Dynamic 2022

$V^2 + x^2 = 25$ by derivative with respect to x

$$2V \frac{dV}{dx} + 2x = 0 \qquad 2a + 2x = 0 \qquad \therefore a = -x$$

In the given equation $V^2 + a^2 = 25$ *Ans .(a)*

Final revision Dynamic 2022

Example

The opposite figure represents the (velocity – displacement) graph for a body moves in a straight line , then the acceleration (a) when the displacement vanishes = $m|sec^2$

(a) - 8

(b) 8

(c) - 20

(d) 20

Final revision Dynamic 2022

The slope $\frac{-20}{50} = \frac{-2}{5}$ and y – intercept = 20 units

The equation of the st. line $V = \frac{-2}{5}S + 20$ $\therefore a = \frac{dV}{dt} = \frac{-2}{5} \times \frac{dS}{dt}$

$\therefore a = \frac{dV}{dt} = \frac{-2}{5} \times V$ when the displacement vanished $V = 20$

$$\therefore a = \frac{-2}{5} \times 20 = -8$$

Ans .(a)

Final revision Dynamic 2022

Concept (5) $a = \frac{dv}{dt}$

$$\therefore \int a dt = \int dv$$

$$\therefore V = \int a dt$$

And $\int_{v_0}^v dv = \int_0^t a dt$

Final revision Dynamic 2022

Concept (6) $V = \frac{dx}{dt}$

$$\therefore \int V dt = \int dx$$

$$\therefore x = \int V dt$$

And $\int_{x_0}^x dx = \int_0^t V dt$

Final revision Dynamic 2022

Concept (7) $a = V \frac{dV}{dx}$ $\therefore \int a dx = \int V dv$ $\therefore \int_{V_0}^V V dV = \int_{x_0}^x a dx$

Final revision Dynamic 2022

Example

A particle moves in a straight line with acceleration a m/sec². Is given as a function in velocity V m / sec as $a = 2V \sqrt{V}$. If the particle started motion from the origin point with velocity 4 m/sec . Then the velocity V at the position $x = 3$ m equals m /sec

(a) 9

(b) 4

(c) 25

(d) 16

Final revision Dynamic 2022

$$\because a = 2V \sqrt{V}$$

$$V \frac{dV}{dx} = 2V \sqrt{V}$$

$$\backslash dV = 2V^{\frac{1}{2}} dx$$

$$\int V^{-\frac{1}{2}} dV = \int 2 dx$$

$$\backslash 2\sqrt{V} = 2x + c$$

$$x_0 = 0, V_0 = 4$$

$$\backslash 2\sqrt{4} = 0 + c$$

$$c = 4$$

$$\backslash 2\sqrt{V} = 2x + 4$$

at $x = 3$

$$\backslash 2\sqrt{V} = 6 + 4$$

$$\backslash \sqrt{V} = 5$$

$$\backslash V = 25$$

Ans .(c)

Final revision Dynamic 2022

Concept (8) The momentum $H = m V$

The change in moment= $\Delta H = m (V_2 - V_1)$

When the acceleration function in time $\Delta H = m \int_{t_1}^{t_2} a dt$

Final revision Dynamic 2022

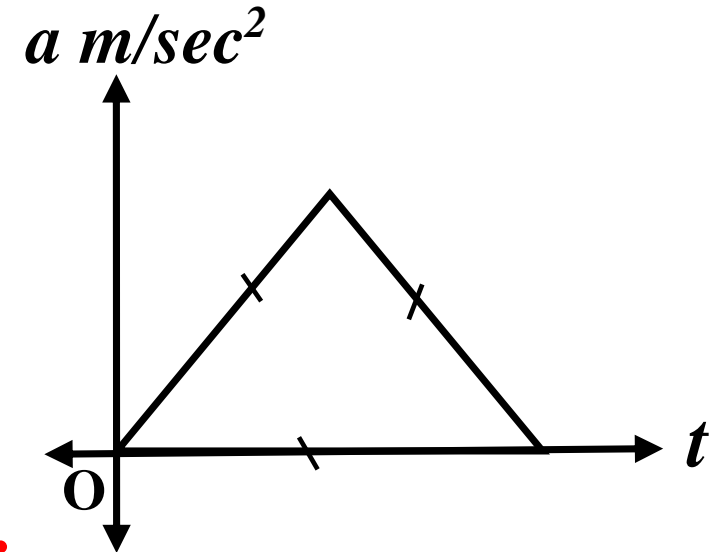

Example

The opposite figure represents the (acceleration – time) graph for a body of mass 8 kg , starts its motion from rest .

If the change of its momentum during the time interval $[0, t]$ equals $72\sqrt{3}$ kg .m / sec .

Then $t = \dots\dots\dots$ sec.

(a) 2

(b) 4

(c) 6

(d) 8

Final revision Dynamic 2022

The change in momentum = $\Delta H = m \int_{t_1}^{t_2} a dt$ = area under the
acceleration – time graph

$$72\sqrt{3} = 8 \times \frac{1}{2} \times t^2 \sin 60^\circ$$

$$\therefore 2\sqrt{3}t^2 = 72\sqrt{3}$$

$$\therefore t^2 = 36$$

$$\therefore t = 6 \text{ sec}$$

Ans .(c)

Concept (9) Newton's first law Uniform motion of a body.

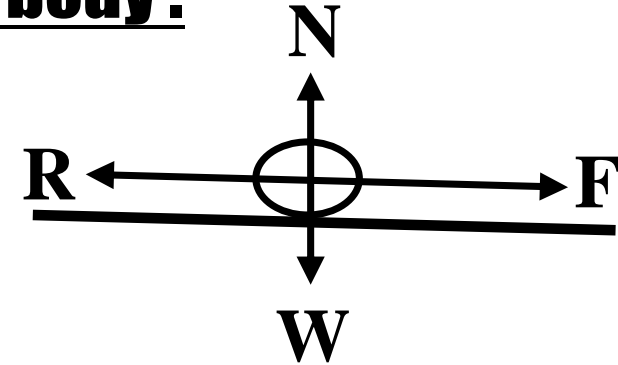

(1) uniform motion on a horizontal plane under the action of a horizontal force .

R the resistance of the plane .

$$R = F$$

Also

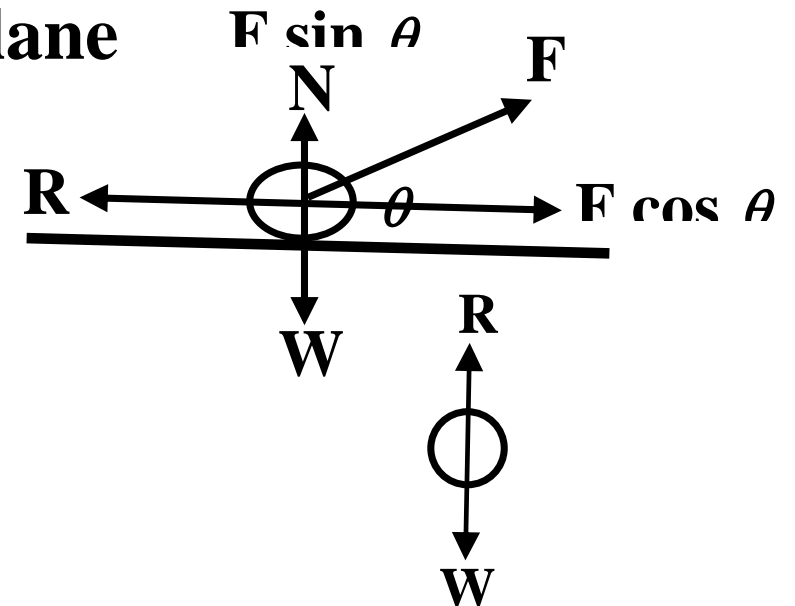

$$N = w$$

(2) Uniform motion of a body on a horizontal plane under the action of an inclined force .

$$F \cos \theta = R$$

$$N + F \sin \theta = W$$

(3) Vertical uniform motion

$$R = w$$

R the resistance

Final revision Dynamic 2022

Example

 An engine of mass 30 ton and force 51 ton.wt . pulls a number of train cars each of mass 10 ton , ascends a slope inclined at an angle 30^0 to the horizontal , with a uniform velocity . If the resistance of the motion of the engine and the cars is 10 kg.wt .per each ton of the mass . Then the number of the cars = car

(a) 8

(b) 5

(c) 9

(d) 7

Final revision Dynamic 2022

Concept (10) Newton's second law

$$\frac{d}{dt}(\vec{H}) = \vec{F} \quad \therefore \frac{d}{dt}(m\vec{V}) = \vec{F}$$

There are two cases

(i) When m is constant $\therefore \frac{d}{dt}(m\vec{V}) = m \frac{d}{dt}(\vec{V}) = m\vec{a} \quad \therefore \vec{F} = m\vec{a}$

(ii) When m is not constant $\therefore \frac{d}{dt}(m\vec{V}) = m \frac{d\vec{V}}{dt} + \vec{V} \frac{dm}{dt}$

Final revision Dynamic 2022

Remarks

(1) When the force is a function of time , and the mass is constant

then $a = \frac{dV}{dt}$

$$\therefore F = ma \qquad \therefore F = m \frac{dV}{dt} \qquad \therefore \int_{t_1}^{t_2} F dt = m \int_{V_1}^{V_2} dV$$

(2) If the force is a function in displacement (s) , and the mass is

constant then $a = V \frac{dV}{dS}$

$$\therefore F = ma \qquad \therefore F = m V \frac{dV}{dS} \qquad \therefore \int_{s_1}^{s_2} F dS = m \int_{V_1}^{V_2} V dV$$

Final revision Dynamic 2022

Example

 A force $F = 3t + 1$ measured in Newton acts upon a boy at rest of mass 4 kg , starting its motion at the origin point (O) on a straight line then the magnitude of the velocity V when $t = 2$ sec.is ...

(a) 4

(b) 2

(c) 3

(d) 5

Final revision Dynamic 2022

$$\because F = ma$$

$$\backslash F = m \frac{dV}{dt}$$

$$\backslash m \int_0^v dV = \int_0^2 F dt$$

$$4 \int_0^v dV = \int_0^2 F dt$$

$$\backslash 4V = \int_0^2 (3t + 1) dt$$

$$\backslash 4V = 8$$

$$\backslash V = 2$$

Ans.(b)

Final revision Dynamic 2022

Example

A body of mass m kg is moving vertically downwards with an acceleration 1 m/sec^2 , under the action of a force acting vertically upward of magnitude 10 kg.wt , and against resistance of magnitude 10 Newton . Then $m = \dots\dots \text{ kg}$

(a) $\frac{135}{11}$

(b) $\frac{220}{27}$

(c) $\frac{245}{22}$

(d) 10

Final revision Dynamic 2022

$$mg - F - R = ma$$

$$9.8m - 10 \times 9.8 - 10 = m$$

$$8.8m = 108$$

$$\therefore m = \frac{135}{11} \text{ kg}$$

Ans .(a)

Final revision Dynamic 2022

Example

A body of mass $m = (2t + 1)$ moves along a straight line parallel to the unit vector \hat{C} and its displacement vector is $\hat{S} = \left(\frac{1}{2}t^2 + t\right)\hat{C}$.

Then the magnitude of the force acting at $t = 2$ sec. is Units

- (a) 5 (b) 20 (c) 11 (d) 10

Final revision Dynamic 2022

$$\vec{V} = \frac{d\vec{S}}{dt} = (t + 1)\hat{c}$$

$$\vec{H} = m\vec{V} = (2t + 1)(t + 1)\hat{c}$$

$$\vec{H} = (2t^2 + 3t + 1)\hat{c}$$

The mass is variable then

$$\vec{F} = \frac{d\vec{H}}{dt} = (4t + 3)\hat{c}$$

at $t = 2$ sec $\vec{F} = 11\hat{c}$

$F = 11$ units

Ans.(c)

Final revision Dynamic 2022

Concept (11) Impulse :-

$$\vec{I} = \vec{F} t \quad I = F t$$

$$I = m(V' - V) = F t$$

$$I = \int_{t_1}^{t_2} F dt = m(V_2 - V_1)$$

Final revision Dynamic 2022

Example

A particle moves in a straight line , its momentum changed by the rate $2t \text{ kg.m/sec}^2$ where t is the time in sec. Then the magnitude of the impulse of the force acting on the particle during the tenth sec. equals Newton . sec.

(a) 19

(b) 17

(c) 20

(d) 21

Final revision Dynamic 2022

$$\therefore F = \frac{d}{dt} (H)$$

$$\therefore \frac{dH}{dt} = 2t$$

$$\therefore F = 2t$$

$$\therefore I = \int_9^{10} F dt$$

$$\therefore I = t^2 \Big|_9^{10} = 19$$

Ans .(a)

Final revision Dynamic 2022

Concept (12) Collision

If two bodies are collide then

The impulse of the first body on the second = The impulse of the second on the first.

$$m_1 \vec{v}_1 + m_2 \vec{v}_2 = m_1 \vec{v}'_1 + m_2 \vec{v}'_2$$

In the elastic collision the kinetic energy does not change before and after collision

Final revision Dynamic 2022

Example

A body of mass 4 kg falls from height 19.6 m above the ground collides with another body of mass 3 kg at rest on the ground and form one body impinges on the ground a distance S cm . Then the value of S given that the resistance of the ground is 2247 kg.wt is

(a) 2cm

(b) 20cm

(c) 20m

(d) 2m

Final revision Dynamic 2022

$$m_1 = 4 \text{ kg}$$

$$S = 19.6 \text{ m}$$

$$V^2 = V_0^2 + 2gS$$

$$, V^2 = 0 + 2 \cdot 9.8 \cdot 19.6$$

$$\ \ V = 19.6 \text{ m / sec}$$

$$m_1 = 4 \text{ kg}$$

$$, V_1 = 19.6$$

$$, m_2 = 3 \text{ kg}$$

$$, V_2 = 0$$

$$m_1 V_1 + m_2 V_2 = (m_1 + m_2) V$$

$$4 \cdot 19.6 + 0 = 7 V$$

$$\ \ V = 11.2 \text{ m / sec}$$

Final revision Dynamic 2022

$$R = 2247 \text{ kg.wt}$$

$$mg - R = ma$$

$$7 \times 9.8 - 2247 \times 9.8 = 7 a$$

$$a = -3.136 \text{ m / sec}^2$$

$$V = 0, V_0 = 11.2$$

$$V^2 = V_0^2 + 2aS \quad \backslash \quad 0 = (11.2)^2 - 2 \cdot 3.136 \cdot S$$

$$\backslash \quad S = 0.02m = 2cm$$

Ans .(a)

Final revision Dynamic 2022

Concept (13) The work $W = \vec{F} \cdot \vec{S}$

$$W = \vec{F} \cdot \vec{S} = \|\vec{F}\| \times \|\vec{S}\| \cos \theta$$

The work done by a variable force

$$W = \int_A^B F dS$$

Final revision Dynamic 2022

Example

The opposite figure :-
represents the (force – position) graph
of a body moves in a straight line starting
from the position $x = -3$.

Then the position (x) of the particle
when the work done by the force
 $= -148$ Joule is $x = \dots\dots\dots$ m

(a) 20

(b) 13

(c) 17

(d) 10

Final revision Dynamic 2022

Let the position of the particle at x
Find the equation of \overrightarrow{AB}

The slope = $\frac{-8}{5}$

and y – intercept = 8

The equation $F = -\frac{8}{5}x + 8$

$$F = \frac{-8}{5}(x - 5)$$

Final revision Dynamic 2022

The force is a function in (x)

$$\text{Work} \int_{x_1}^{x_2} F dx$$

$$W = \int_{-3}^5 F dx + \int_5^x F dx = -148$$

$$W = \frac{1}{2} \times 8 \times 8 + \frac{1}{2} (x - 5) \left(\frac{-8}{5} (x - 5) \right) = -148$$

$$32 - \frac{4}{5} (x - 5)^2 = -148 \quad \therefore (x - 5)^2 = 225$$

$$\therefore (x - 5) = -15 \quad \therefore x = -10 \text{ ref.}$$

$$\therefore (x - 5) = 15 \quad \therefore x = 20 \quad \text{Ans. (a)}$$

Final revision Dynamic 2022

Concept (14) The kinetic Energy

The kinetic energy of a body denoted by T is defined as the product of half the mass of the particle times the square of the magnitude of its velocity.

$$T = \frac{1}{2} m V^2$$

Final revision Dynamic 2022

Concept (15) Principle of work and energy .

The change in kinetic energy of a particle when it is moving from an initial position to a final position is equal to the work done by the force acting on it during the displacement between these two positions

$$T - T_0 = W .$$

Final revision Dynamic 2022

Concept (16) **Potential Energy**

The potential energy of a particle at a certain instant denoted by P is defined as the work done by acting forces on the body if it moved it from its position at this instant to a fixed position on the straight line on which motion occurs.

Final revision Dynamic 2022

Rule (1)

The change in the potential energy of a particle is equal to negative the work done by the force during the motion

$$P - P_0 = -W$$

Rule (2)

The sum of kinetic and potential energies is constant during motion

$$T + P = T_0 + P_0$$

Final revision Dynamic 2022

Concept (17) The power

The power : - is the time rate of doing work or

The power : - is the work done in unit time $\text{power} = \frac{dw}{dt}$

$$\text{The power} = \frac{dw}{dt} = \frac{d}{dt}(FS) = F \frac{dS}{dt} = F \times V$$

$$\text{The average power} = \frac{\text{Work}}{\text{time}}$$

$$\text{The work} \int_{t_1}^{t_2} \text{Power } dt$$

Final revision Dynamic 2022

Example

A force \vec{F} of magnitude 7.5 kg.wt acts upon a body and moves it in a straight line , if the velocity of the body at a certain moment is 36 km|hr , then the power resulted from the force at the moment cannot equal to

(a) $80 \text{ kg wt } \cdot \text{m} | \text{sec}$

(b) 735 watt

(c) $50 \text{ kg wt } \cdot \text{m} | \text{sec}$

(d) 700 watt

Final revision Dynamic 2022

The power = $F \times V = 7.5 \times 9.8 \times 36 \times \frac{5}{18} = 735 \text{ watt}$

The power $\in [0 , 735]$ $\therefore 80 \times 9.8 = 784 \notin [0 , 735]$

The power resulted cannot equal 80 kg.wt m|sec (a)

Final revision Dynamic 2022

Another solution

$$\text{The power} = \vec{F} \cdot \vec{V} = F \times V \cos \theta$$

$$\text{The power} = 7.5 \times 9.8 \times 36 \times \frac{5}{18} \cos \theta$$

$$\text{The power} = 735 \cos \theta \text{ watt} \quad \because -1 \leq \cos \theta \leq 1$$

$$\text{The power} \in [0, 735] \quad \therefore 80 \times 9.8 = 784 \notin [0, 735]$$

The power resulted cannot equal 80 kg.wt m|sec (a)

Final revision Dynamic 2022

Example

A particle moves in a straight line where its velocity (V) is given as a function in position (x) by the relation $V^2 = \ln x : x > 1$, if (a) is the acceleration of the motion, then

(a) $2ax = 1$

(b) $ax^2 = 1$

(c) $ax = 2$

(d) $ax^2 = 2$

Final revision Dynamic 2022

$$V^2 = \ln x$$

$$2V \times a = \frac{1}{x} \times V$$

$$2V \times \frac{dV}{dt} = \frac{1}{x} \times \frac{dx}{dt}$$

$$\therefore 2ax = 1$$

Ans .(a)

Final revision Dynamic 2022

Example

A , B are two smooth balls and the mass of each is m kg , the ball A is moving in a straight line on a smooth horizontal plane with velocity 8 m/ sec. If the ball A collided with the rested ball B with an elastic collision, then the velocity of the ball A after collision directly =

- (a) Zero**
- (b) 8 m/sec in the opposite direction**
- (c) 4 m/ sec in the opposite direction**
- (d) 4 m /sec in the same direction**

Final revision Dynamic 2022

The collision is elastic then there is no shortage in the kinetic energy

$$m_1 V_1 + m_2 V_2 = m_1 V_1' + m_2 V_2'$$

$$m \times 8 + zero = m V_1' + m V_2' \quad \therefore V_1' + V_2' = 8 \quad (1)$$

$$\frac{1}{2} m V_1^2 + \frac{1}{2} m V_2^2 = \frac{1}{2} m (V_1')^2 + \frac{1}{2} m (V_2')^2$$

$$64 + zero = (V_1')^2 + (V_2')^2 \quad \therefore (V_1')^2 + (V_2')^2 = 64 \quad (2)$$

Solve (1) , (2)

$$\therefore (V_1')^2 + (8 - V_1')^2 = 64 \quad \therefore (V_1')^2 + 64 - 16V_1' + (V_1')^2 = 64$$

$$\therefore 2(V_1')^2 - 16V_1' = 0 \quad \therefore V_1'(V_1' - 8) = 0$$

$$\therefore V_1' = 8 \text{ ref} \quad \therefore V_1' = zero \quad \text{Ans .(a)}$$
